Document Management

DDM CAD is an easy to use, multi-CAD Product Data Management solution for the leading design applications including IRONCAD®, Pro|ENGINEER®, SolidWorks®, Inventor®, Solid Edge® and AutoCAD®. DDM enables your organization to manage, share and control all of your design data in one repository, supporting you to work faster and smarter.

DDM OFFICE allows users to manage critical project documentation in a secure multi-user environment. Along with the ability to track data and project progress, DDM provides the tools needed to comply with international quality standards. Using familiar Windows look and feel interfaces you can enter, review, search and retrieve all project information.

DDM WEB provides the capability to make engineering information securely available internally and externally to your customers and suppliers, enabling you to respond quicker and make informed decisions immediately. All of the information is real-time and requires no publishing by users.

DDM RIFS (Remote Intelligent File Servers) are an affordable way of making all your design data available across multiple sites whether across Europe or across the World. Without restriction on the number of remote locations that can be supported, you can be productive wherever and however you choose.
